Listing of the Claims

This listing of claims will replace all prior versions, and listings, of the claims in the application.

1. (Currently Amended) A structure formed by chemical vapor deposition, being a planar article having a planar direction and a normal direction, wherein the structure has a dimension in the planar direction that is larger than the dimension in the normal dimension and having grains substantially oriented in the planar direction.
2. (Original) A structure, as claimed in Claim 1, wherein the structure is a flat ring having a circumference and wherein the grains are oriented in a substantially radial direction around the circumference of the ring.
3. (Currently Amended) A structure, as claimed in Claim 1 ~~or Claim 2~~, wherein the structure comprises silicon carbide.
4. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 3~~ Claim 1, wherein the structure is a ring that comprises an inner diameter and an outer diameter and wherein the distance between the inner diameter and outer diameter is approximately 25mm (one inch).
5. (Original) A structure, as claimed in Claim 4, wherein the inner diameter is between about 100 mm to 600 mm in diameter.
6. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 5~~ Claim 1, having an axial thickness of ~~between about~~ less than 5 mm (0.2 inches) and a diameter of up to 356 mm (fourteen inches).
7. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 6~~ Claim 1, wherein the structure is a flat ring that has a curved outer surface.

8. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 7~~Claim 1, wherein the structure is a flat ring having a circumference that has substantially symmetrical stresses around the circumference of the ring.
9. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 8~~Claim 1, in which the structure comprises CVD deposited silicon carbide comprising an opacifying dopant dispersed in the silicon carbide in an amount sufficient to provide an opacity greater than 10,000 times that of CVD-deposited silicon carbide.
10. (Original) A structure, as claimed in Claim 9, in which the dopant is nitrogen in an amount 100 ppm to about 5000 ppm.
11. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 10~~Claim 1, in which the structure comprises CVD deposited silicon carbide material comprising FCC Moissanite-3C silicon carbide having a peak ratio of 220 planes to 111 planes ranging between about 0.30 and about 1.25, as measured by x-ray diffraction.
12. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 11~~Claim 1, in which the ~~the~~ peak ratio ranges between about 0.33 and about 0.60.
13. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 12~~Claim 1, in which the structure comprises CVD deposited silicon carbide material comprising grains having their axes of growth substantially parallel to each other, and having rotational orientation that is substantially random with respect to the axes of grain growth of the grains.
14. (Currently Amended) A structure, as claimed in ~~any one of Claims 1 to 13~~Claim 1, in which the structure comprises silicon carbide and further comprises a layer of silicon deposited on at least one surface thereof.

THIS PAGE BLANK (USPTO)

15. (Currently Amended) A method of making structures as claimed in ~~any preceding claim~~ Claim 1, comprising the steps of:-
- a) forming material by chemical vapor deposition on a surface; and
 - b) dividing the material by slicing along a direction such as will form one or more structures having a dimension in the planar direction that is larger than the dimension in the normal dimension and having grains substantially oriented in the planar direction.
16. (Original) A method as claimed in Claim 15, in which the structures comprise flat rings, the method comprising:
- (a) providing a round cross-sectional tube in a deposition zone;
 - (b) directing precursor gas into the tube;
 - (c) chemically reacting the precursor gas to form a solid deposit in the shape of the tube on the inside on the tube;
 - (d) removing the solid deposit; and
 - (e) dividing the solid deposit into substantially flat rings either before or after removal.
17. (Original) A method, as claimed in Claim 16, further comprising directing precursor gas onto an outer surface of the tube, chemically reacting this precursor gas to form a solid deposit on the outside of the tube, removing this solid deposit, and dividing this solid deposit into substantially flat rings either before or after removal.
18. (Original) A method, as claimed in Claim 15, in which the structures comprise flat rings, the method comprising:
- (a) providing in a deposition zone a mandrel having a substantially round cross-sectional;
 - (b) directing precursor gas onto the outer surface of the mandrel;
 - (c) chemically reacting the precursor gas to form a solid deposit approximately in the shape of the mandrel on the outside of the mandrel;

- (d) removing the solid deposit; and
- (e) dividing the solid deposit into substantially flat rings either before or after removal.

- 19. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 18~~Claim 15, wherein the precursor gas comprises methyltrichlorosilane.
- 20. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 19~~Claim 15, wherein the tube comprises a graphite tube.
- 21. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 20~~Claim 15, wherein the deposit comprises silicon carbide.
- 22. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 21~~Claim 15, wherein the tube is provided as a plurality of segments.
- 23. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 22~~Claim 15, wherein the dividing comprises slicing the deposit into flat rings having an axial thickness of ~~between about~~less than 5 mm (0.2 inches) and a diameter of up to about 356 mm (fourteen inches).
- 24. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 23~~Claim 15, further comprising (f) machining the substantially flat rings to desired dimensions.
- 25. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 24~~Claim 15, wherein the ring has a planar direction and a normal direction with the dimension in the planar direction being larger than the dimension in the normal dimension, and wherein grains of the ring that are deposited by chemical vapor deposition are substantially oriented in the planar direction.

26. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 26~~Claim 15, wherein the ring has a circumference and wherein the grains are oriented in a substantially radial direction around the circumference of the ring.
27. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 26~~Claim 15, wherein several tubes are positioned within a CVD furnace.
28. (Currently Amended) A method, as claimed in ~~any one of Claims 15 to 28~~Claim 15, further comprising applying a coating of silicon to at least one surface of the ring.
29. (Original) A method, as claimed in Claim 28, further comprising machining the ring prior to applying the silicon coating.
30. (Original) A method, as claimed in Claim 28, wherein the silicon coating is applied using chemical vapor deposition.
